TECHNICAL SKILLS

Languages | JavaScript, SQL, Python, Java, Typescript, HTML/CSS, Bash

Frameworks | React, Next.js, Express.js, React Native

Developer Tools | Git, GitHub, VS Code, Vite

Databases | MongoDB, PostgreSQL, MySQL, SQLite, Redis

Backend / Cloud | Node.js, AWS EC2, Supabase, Firebase, OpenAI API,

Libraries | Tailwind CSS, jQuery, Shadcn/UI, Expo

AI Tools | Claude Code, OpenCode, Antigravity, Copilot, Codex

EDUCATION

Bachelor of Science in Computer Science

City College of Angeles

Angeles City, Pampanga

EXPERIENCE

Freelance Full-stack Developer

May 2024 – Jan 2026

- **G3oD (Geometry Learning App)**
 - Built a fun, voice-guided geometry app for Grade 8 students that explains concepts in real time with 3D shapes students can rotate and explore.
 - Added clear spoken hints and instructions so kids (and teachers) can use it easily even without reading long text. Students and teachers loved it after hands-on testing and feedback.
 - Created a straightforward classroom system for teachers: they share a simple code to let students join, unlock lessons when ready, and see who's progressing all kept secure and private.
- **Mealwise**
 - Launched a multi-vendor platform so restaurants & chefs sell directly to nearby buyers
 - Separate secure logins make management simple for admins, sellers, and customers
 - Live chat and automatic updates cut down on order mix-ups and delays
 - Beautiful, fast-loading design that's fully responsive across devices
 - Gave sellers powerful insights: track earnings, expenses, and trends in one place
- **Smart Space**
 - Built an easy-to-use app that lets people see furniture in their real room using Augmented Reality (AR) and completely reimagine spaces with AI-powered redesigns
 - Created a smart "Hybrid Capture" feature that blends live camera views with 3D furniture models and instantly applies photorealistic style changes using AI

PROJECTS

- **PawScan**
 - Built a complete mobile app that gives pet owners instant AI health checks for their dogs and cats, plus quick, secure chat access to real licensed veterinarians
 - Designed and handled every part from the user-friendly interface to backend setup — making the app reliable, smooth, and easy for everyday pet parents to use
 - Made the process much faster: ~30% quicker overall workflow with instant AI pre-check insights, and ~40% less waiting time to connect and talk to a vet when needed
