TECHNICAL SKILLS

Languages | JavaScript, TypeScript, SQL, Python, Java, HTML/CSS, Bash

Frontend | React, Next.js, React Native, Tailwind CSS, Shadcn/UI, NativeWind, Expo

Backend | Node.js, Express.js, REST APIs

Developer Tools | Git, GitHub, VS Code, Cursor, Vite, Tauri

Testing | Playwright, Vitest

Databases | MongoDB, PostgreSQL, MySQL, SQLite, Redis

Cloud & Services | Node.js, AWS EC2, Supabase, Firebase, OpenAI API,

AI Tools | Claude Code, Cursor, GitHub Copilot, OpenCode, Codex, Antigravity

EDUCATION

Bachelor of Science in Computer Science

City College of Angeles

Angeles City, Pampanga

EXPERIENCE

CRM, CMS & Automation Specialist

Jan 2025 – April 2025

- Managed **GoHighLevel** ecosystems, including automated lead tracking, calendar integrations, and conversion-focused funnels
- Executed large-scale data migrations and cloned accounts within GHL while maintaining data integrity
- Maintained high-performance **WordPress** sites, optimizing responsive layouts, SEO metadata, and navigation structures
- Designed landing pages for lead generation and performed technical maintenance, including plugin management and troubleshooting.

Full-stack Developer

May 2025 – April 2026

- Architected and delivered a production-grade CRM serving internal staff and external clients across 30+ database tables, 8 user roles, and 50+ data adapters using Next.js 16, React 19, TypeScript, Supabase, and Vercel
- Integrated OpenRouter LLM API for an AI-powered content pipeline — auto-generates SEO-optimized news articles from case studies via daily cron with cost and token tracking
- Created an adapter pattern data layer with dependency injection, enabling in-memory unit testing without coupling UI to the database — 90+ Vitest tests with MSW and 40+ Playwright E2E specs
- Built a client portal with separate layout, brand switching, drive file access, contract viewing, and briefing uploads — fully decoupled from the internal CRM shell
- Delivered a full CMS module: BlockNote rich-text editor, event recurrence engine (daily/weekly/monthly rules), case studies, job application tracking, and scheduled publishing
- Designed and deployed client-facing landing pages using Next.js and Tailwind CSS, optimized for performance and responsive design.

PROJECTS

- **PawScan** - <https://github.com/bnetpineda/PawScan>
 - Built a complete mobile app that gives pet owners instant AI health checks for their dogs and cats, plus quick, secure chat access to real licensed veterinarians

- Designed and handled every part from the user-friendly interface to backend setup — making the app reliable, smooth, and easy for everyday pet parents to use
- Made the process much faster: ~30% quicker overall workflow with instant AI pre-check insights, and ~40% less waiting time to connect and talk to a vet when needed
- **Mealwise** - <https://mealchoice-cca.vercel.app/>
 - Launched a multi-vendor platform so restaurants & chefs sell directly to nearby buyers
 - Separate secure logins make management simple for admins, sellers, and customers
 - Live chat and automatic updates cut down on order mix-ups and delays
 - Beautiful, fast-loading design that's fully responsive across devices
 - Gave sellers powerful insights: track earnings, expenses, and trends in one place
- **G3oD (Geometry Learning App)** - <https://github.com/bnetpineda/G3oD-app>
 - Built a fun, voice-guided geometry app for Grade 8 students that explains concepts in real time with 3D shapes students can rotate and explore
 - Added clear spoken hints and instructions so kids (and teachers) can use it easily even without reading long text. Students and teachers loved it after hands-on testing and feedback
 - Created a straightforward classroom system for teachers: they share a simple code to let students join, unlock lessons when ready, and see who's progressing all kept secure and private.
